Monograph Title (security intelligence in an example vehicle management system)

Mahsoumeh Nawrozi

March 2022

1 Introduction

In today's world, the issue of security among the people is very important. Security is not endangered or is protected from danger, and providing security for the people can be said to be challenging and with the increase in crime and fraud in the field. Has caused harm to the people of the society. It is better for a society whose dangers are on the same side with the people. We should also try to reduce its problems. Of course, in today's world, with the advancement of technology, these problems can be reduced with the advancement of technology. There are ready-made ways to create security that can be used to create better security. QR codes are a technology that has been created in this field. In fact, QR codes store information about a product or a person in a machine-readable format that can be easily used and can be scanned with a scanner or smartphones. Appearance and received relevant information from it. In fact, this technology is used in many places, for example: for many manufacturing jobs; Orders and information and security can be mentioned. I also tried to use this technology for risks due to security issues, and in this research, I examine the QR codes in the vehicle management system.
